

Three-state adaptive policy (online, label-free)

Online triggers only

burst: $r_t \geq \tau_b$ · strong: $\tilde{r}_t \geq \tau_s$ · overlap: $\tilde{o}_t \geq \tau_o$ with minimum support
holds are DURATIONS on the sensor clock (t_{assist} , t_{strong}), not frame counts
no VIODE level · no GT · no ATE/RPE · no hold-out metrics
